

JIFFY LUBE'S AIR CONDITIONING SERVICE R134a

Revised 05/17/2022

Jiffy Lube's air conditioning service is \$199.99 and includes a visual inspection of the system, analysis, filtering and capture of the R134a refrigerant, and a vacuum / pressure leak check of the system.

Prior to starting service, the R134a refrigerant in the system will be analyzed for purity. If the presence of Stop Leak Additive is found to be in the system, additional service will need to be performed including; removal and capture of the R134a refrigerant for proper disposal. Replacing the Receiver Dryer / Accumulator, the Orifice Tube and flushing the entire system. This service is an additional \$200.00 for most vehicles. If you decide not to perform this additional service, the process can be stopped at this point and you will be charged \$20.00 for the inspection and R134a refrigerant analysis.

If the purity of the R134a refrigerant in the system is found to be below 95% or the presence of Stop Leak Additive is found, the contents of the system must be removed and captured for proper disposal and cannot be reused. In order to recharge the system, all new R134a refrigerant will be used. The system on your vehicle holds _____ ounces of R134a refrigerant to recharge. Subtracting the 16 ounces included with the service, an additional _____ ounces will be required at an additional cost of \$_____. If you decide not to complete the service at this point in the service, you will be charged \$20.00 for the inspection and R134a refrigerant analysis

If a leak is found, we will provide you with an estimate to repair the leak. If you decide not to repair the leak, we will not recharge the system and you will be charged \$40.00 for the inspection, R134a refrigerant analysis and leak check.

If no leaks are found, the system will be recharged with the original amount of R134a refrigerant removed from the system, plus up to an additional 16 ounces of R134a refrigerant. If the system is still low after adding the reclaimed R134a refrigerant and the included 16 ounces, additional R134a refrigerant will be added at the rate of \$1.90 per ounce.

Unfortunately, some vehicles may have minute leaks that go undetected by a vacuum/pressure leak test. For this reason, Jiffy Lube cannot warranty against minute leaks in your system.
